

# CUTTING SOFTWARE DRAWCUT

**DRAWCUT PRO  
VERSION 2018  
OUT NOW!**

# DRAWCUT – THE WORLD'S HIPPEST CUTTING SOFTWARE - FOR NOVICES AND PROFESSIONALS

## AMAZING FEATURES

DrawCut is a leading-edge, independent cutting software for Windows. It offers an extensive selection of tools and features for creating and cutting of layouts, lettering and artwork with a vinyl cutter. Try out the three versions LITE, PRO and EXPERT!

## EASY TO USE

DrawCut provides a simple and smooth user interface. The installation takes just a few minutes. First, a calibration wizard guides you through the necessary settings. Then you can immediately get started. Everything is clearly organized and easy to find.

## YOU WILL LOVE THIS

You have probably used one or the other cutting software in the past. But you are sure going to love DrawCut! The powerful and easy-to-use features will significantly simplify working with your vinyl cutter as well as creating your illustrations, thus making you more productive and overall happier. Promise!

## LAPOS Q CONTOUR CUTTING

LAPOS Q is the most powerful contour cutting system on the market. It supports multi marks for extra long cut files, multi-scan for avoiding read errors, smart-align to compensate for printing distortions, dynamic marks for print&cut in full width and length of the medium, contour vectorization for contour-cutting photos and bitmaps.

DrawCut LITE is included for free with every vinyl cutter of the C V and S II series, as well as the older units of the CIV and S series. DrawCut LITE is an easy-to-use powerful software for editing your artwork and cut files. It provides many special features for creating cuttable designs. You can freely arrange your graphics and text objects, import vector graphics and even set colors to be cut separately.

- ✓ **Stand-alone layout and design**
- ✓ **Advanced cutting options**
- ✓ **Professional vinyl cutter control**

DrawCut PRO is included with T II series devices. DrawCut PRO lets you control your cutter very comfortably. Along with LAPOS Q, you receive the world's best crop mark recognition system for contour cutting. Features such as „Align text to path“, „Cast shadow“, „Weld text“, drawing of stars, arrows and other shapes and many other features help you become independent of CorelDraw and Adobe Illustrator. DrawCut PRO is also available as an upgrade from DrawCut LITE.

- ✓ **Powerful vectorization**
- ✓ **LAPOS Q contour cutting**
- ✓ **Design and editing for advanced users**
- ✓ **Definition of different line types for e.g. perforation cut**
- ✓ **Improved offset compensation for better cut results**
- ✓ **Management of different tools and cutting parameters according to line colour for e.g. cutting with two different force settings**
- ✓ **Cutting path optimisation for shorter travel paths**
- ✓ **Improved file imports for large files**

DrawCut EXPERT is a complete cutting software package that is sure to satisfy all functionality, productivity and usability needs - with features and tools for the design and layout of signs, textile finishes and stickers, up to the manufacture of banners and posters. The special effects are spectacular and unique in comparison to the competition. Furthermore, DrawCut EXPERT includes complete libraries of text tools, curve tools, bitmap tools, object tools, a powerful vectorization feature as well as extensive cutter control tools and contour cutting functions.

- ✓ **More cutting options, such as tiling and arranging of objects**
- ✓ **3D modeling with rotation, extrusion, curvature and much more**
- ✓ **Many additional features such as multi-outline, stripe design and gradient filling**

## COMPARISON OF DRAWCUT FEATURES

		DC LITE	DC PRO	DC EXPERT
<b>VECTOR BRUSHES</b>	Tool for vector drawings with brush shapes			✓
<b>ADVANCED POWER SHAPES</b>	Arrow, rounded arrow, star, rounded star, chaos star, logarithmic spiral and Archimedes spiral (with number of loops and starting point/angle)		✓	✓
<b>NODE EDITING</b>	Power node, object control points, add/remove nodes, to line, to curve, open/close shapes, creating sharp, soft and symmetric nodes. Interactive connector, automatic connecting and smoothing	✓	✓	✓
<b>KNIFE/CUTTING AND DELETING</b>	Separating and removing vector graphics and bitmaps along fixed vector path			✓
<b>AUTOMATIC WELDING</b>	Automatically converts individual shapes into a single shape and removes their overlapping areas (curves)			✓
<b>MEASURING TOOLS</b>	Calculates lengths and areas of lines and closed objects	✓	✓	✓
<b>STRIPE DESIGN</b>	Division of object or text into stripes. Starting width, ending width, distance and number of stripes can be configured			✓
<b>DROP SHADOW</b>	Setting of color, x and y offset and an inset (gap)		✓	✓
<b>3D MODELING</b>	Expert 3D modeling tools for transforming of vector objects into 3D objects with rotation, extrusion, curve, lens, shadow and light tools			✓
<b>ALIGN TEXT TO PATH</b>	Freely align text to path or shape and configure any offset (also negative offset)		✓	✓
<b>LAPOS</b>	Contour cutting with laser point crop marks	✓	✓	✓
<b>LAPOS Q</b>	Automatic contour cutting with sequential dynamic multi crop marks with Secabo T II series		✓	✓
<b>TILES</b>	Automatically place same-colored objects together to reduce waste of film		✓	✓
<b>EASY-LIFT MARKS</b>	Special hooks are cut on the inside of letters and objects with a hole, e.g. a, b, d, e, g, etc., which greatly facilitates the removal of these interior areas of the respective letters or objects	✓	✓	✓
<b>QUICK WEEDING</b>	Adjusting of a grid box and subsequent insertion of the lines via plot file does not affect the strokes of the text to allow for quick weeding	✓	✓	✓
<b>VECTORIZATION</b>	Easily vectorize bitmaps to create precisely cuttable vector paths		✓	✓

These are only some features of the DrawCut versions. To learn more, visit [www.draw-cut.com](http://www.draw-cut.com)
